

THE SOLUTIONS

Volunteer movements and privately funded private sector solutions already in progress include:

- Mitigation strategies include prevention of fraud and abuse through public intelligence and early warning alert systems. This is why *VP Task Force* software, mobile apps & research repositories were developed,
- Citizen to Citizen (#C2C) social media movements working in tandem with public reporting & warning systems; such as *Altruesoft*® technology. Systems include publicly managed CRM & CMS systems.
- Collective education & unity (such as #Metoo and #C2C social media movements) focused on core problem (abuser traits) as the central catalyst for abuse,
- Preemptive technological and reporting platforms integrated with relevant internet public safety resources enabled with accountability processes to mitigate potential/actual civil and criminal offences,
- Legislative reforms & increased mandatory mental health counseling (sign petitions at: www.citizenspublicsafetynetwork.com/petitions),
- Specialized Courts & greater freedom for public policy focused on public reporting, monitoring and citizen online postings of victim-approved perpetrator alerts, supported by verifiable evidence a testimony,
- Creative consequences for offenders such as their paying increased taxes to alleviate burdens they consistently perpetrate on tax payers. incarceration is only a solution after all else fails.
- Government and private sector working in tandem with citizens, such as *Infragard* (partnership between the FBI and the private sector) model with an additional emphasis to provide protective measures for vulnerable persons, including collective response systems to combat, domestic violence, elder abuse, child abuse, white-collar crime (fraud), professional, business and facility violations,
- Enforced penalties and loss of State licenses for professionals whom knowingly exploit their clients for purpose of unjust enrichment, as well as provide false or fraudulent concealed information to the Courts.

#C2C IS HASHTAG-INTERNET ACTIVISM

Hashtag activism is the use of hashtags for protest or supporting a cause through the usage of social media outlets. #C2C is hashtag activism further supported by *Altruesofts*® proprietary citizen reporting and tracking software working in unison with Information Communication Technologies (ICTs) thus making analyzed communication, information, and evidence readily available and efficient.

This process is known as internet activism, digital campaigning, cyberactivism, e-campaigning, and works phenomenally well at creating social awareness, advocacy and public mobilization. This process can also evoke rapid legislative changes when adopted by target activists, organizations and netizens.

The #Metoo hashing activism model was effectively used against sexual assault proving that the internet, where individuals feel more comfortable talking about controversial topics facilitates positive social change. #Metoo brought widespread attention

to sexual assault and caused much controversy about changes that should be made accordingly. #C2C will do the same. According to the *Institute for Politics, Democracy & the Internet*, what they call “Online Political Citizens” (OPCs) are “seven times more likely than average citizens to serve as opinion leaders among their friends, relatives and colleagues.

Like #Metoo, #C2C’s aim is similar but with a more expansive reach which focuses on key vulnerable person populations, *i.e.*, elder abuse, domestic violence, child abuse and all persons affected by white collar-crime (fraud), malpractice, business, professional and facility violations.

Altruesoft® - Altruism & Accountability In Action.

Citizen to Citizen & Civic
Accountability Reporting Technology.

The Altruesoft® software suite’s direct evidence documentation and citizen-to-citizen (#C2C) reporting platforms provide the perfect solution for verifiable whistle-blowing, citizen policing, civic accountability tracking, compliance reporting and perpetrator profiling through; direct victim testimony, field-data gathering, crowd-sourcing, AI algorithm source retrieval, repository analysis, “repeating pattern” research, litigation evidence and public safety geolocation alert systems.

VP Task Force™

Altruesoft’s® proprietary synergistic software suite where each component “works together” to document, investigate, profile, and track fraud and abuse related events, in unison with intent activism creates a verifiable means for citizens to warn one another of domestic public safety threats. These public safety tools were specifically designed to create a deterrent to fraud and abuse while promoting civic accountability & Citizen-to-Citizen (#C2C) public safety reporting and alerting systems.

Aspects of the integrated suite includes educating the public on how to research abuse, investigate fraud or corruption, inform one another and civic institutions of violations, fraud, abuse and perpetrator alerts of those whom present a public safety risk by their repeated exploitation of vulnerable persons, taxpayers as well as facility standards violations.
